

XSight

Turn Past Calls Into Future Wins

Most organizations know what happened. XSight helps them understand why it happened and what to do next.

The Builder

Lee Ben Shimon

B.Sc. Computer Science Graduated,
The College of Management
Academic Studies

The Mission

My mission is to build practical AI-based systems that solve real business problems and connect software engineering with business value.

The Messy Data: Historical Sales Calls & Metadata

Sales teams know which deals won or lost, but rarely know why. XSight transforms raw conversation data into actionable insights, enabling them to understand the reasons behind outcomes and improve future performance.

The XSight Engine

AI-Powered Analysis of Sales Interactions

Sales
Managers

Team
Leaders

Reps

Business
Analysts

Hidden Patterns:
Identifying structural
differences between
won and lost deals.

Customer Objections:
Categorizing recurring
pushback and pricing
concerns.

Winning Behaviors:
Highlighting specific
agent actions that
successfully close deals.

Frontend (User Experience)

- React / Vite

Role: Modern dashboard and natural language chat interface.

Backend (API & Routing)

- Python + Flask

Role: API layer receiving requests and communicating with AWS via boto3.

AI & RAG (Intelligence)

- Amazon Bedrock Agent (Orchestration)
- Amazon Bedrock Knowledge Base (RAG)
- LLM Provider (Generation)

Cloud & Data (Infrastructure)

- AWS Lambda (Action Groups / Tools)
- Amazon S3 (Transcripts & Metadata in CSV/JSON)
- Docker & EC2 (Containerized public deployment)
- Git / GitHub (Source control)

Live Demo

RAG Retrieval in Action

What makes successful calls successful?

Based on analysis, successful calls often feature proactive addressing of customer pain points, clear articulation of value propositions, and active listening. Agents who ask open-ended questions early on see higher conversion rates.
(Sources: Knowledge Base)

Sources: Knowledge

Knowledge Base

Specific Evidence Extraction

Show calls where the product was not relevant to the customer.

Here are examples of calls where the product was deemed not relevant:

- **Call #12458 (Agent: John D., Customer: Acme)** Customer specified budget constraints that the product suite does not accommodate.
- **Call #13012 (Agent: Maria K., Customer: Beta Industries):** Product features did not align with customer's specialized workflow requirements.
- **Call #13560 (Agent: Robert S., Customer: Gamma Global):** Customer indicated they are locked into competitor's contract for the next 12 months.

Transcripts & Metadata

Lambda Tool Execution

Generate a performance report for Sarah Levi.

Performance Report: Sarah Levi | Period: Q3 2024

- Calls Handled	320
- Average Handle Time	4m 15s
- Conversion Rate	18.5%
- CSAT Score	4.7/5

Action Group Triggered:
AWS Lambda

Challenges and Next Steps

What Works Well

- * Natural language questions over internal sales data
- * RAG retrieval from Bedrock Knowledge Base
- * Bedrock Agent orchestration
- * Lambda Action Groups as tools
- * Dockerized deployment on EC2
- * Evidence-based answers from internal records

Technical Challenges

- * Designing meaningful sales metadata
- * Making the Knowledge Base retrieve the right calls
- * Deciding when to use RAG and when to use tools
- * Prompt engineering for the Bedrock Agent
- * Connecting Flask, boto3, Bedrock, Lambda, Docker, and EC2
- * Keeping the system simple enough for a working live demo

Next Steps

- * Real audio upload and transcription
- * Automatic metadata extraction from new calls
- * CRM integration
- * Real-time call analysis
- * Predictive deal scoring
- * Advanced manager dashboard
- * Exportable coaching reports

XSight helps teams move from knowing what happened to understanding why it happened — and what to do next.
